Ginny:

See attached for PSU's memo summarizing the results of the January test. Note that the largest impact, for depths greater than 8 meters (Tables 1 and 2), is 0.04 mg/L (not 0.03 mg/L as stated in the text of the memo). The TMDL modeling uses depths greater than 8 meters as well, so these are the more relevant results.

Thanks,

Brian Nickel, E.I.T.
